## DETAILED ACTION

### *Election/Restrictions*

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

For modified nucleotides that enhance affinity: modified pyrimidine nucleobases as recited in claims 5-11, modified purine nucleobases as recited in claims 14, 15 and 17, modified sugars as recited in claims 18-19 and modified internucleoside linkages as recited in claim 20.

For modified nucleotides that decrease affinity: modified nucleobases, modified sugars or modified internucleoside linkages as recited in claims 23.

Applicant is required, in reply to this action, to elect a single species of nucleotide that enhances affinity and a single species of nucleotide that decreases affinity; to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: compositions comprising modified nucleotides that enhance affinity are not a contribution over the prior art. For example, Parrish et al. (cited on IDS) disclose compositions comprising modified bases, sugars and phosphate linkages including those specifically recited in the instant claims.

Additionally, modified nucleotides that enhance affinity do not share a special technical feature with modified nucleotides that decrease affinity because each class of modifications have different functions of enhancing or decreasing affinity. Among the modifications that decrease affinity, modified nucleobases, sugars and internucleoside linkages do not share a special technical feature because of the different structure and mechanism by which the affinity is decreased.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 1635

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
